

## **Preface**

The central statistical organization has recently undergone much of development process either in applying modern systems or in up to -date classifications and in the collection of data. The significance of improving trade statistics is due to the need of producing accurate data that could be as indications of foreign trade with the trade partners in the world.

These indications serve in the planning actions and future economic predications, in which the appropriate trade policies can be stetted up and the trade relationships with the rest of the world could be realized, accordingly the suitable policies should be created in order to develop the trade exchange with the regional and international blocks.

In light of its orientations, the central statistical organizations exerted its efforts to make such data in hand through different publications that fulfill al the needs. One of these publications is the foreign trade statistics 2005, which contains variety of indications on the foreign trade sector.

We hope this publication will contribute to enhance the statistical library with the required data; we also welcome any remarks or comments aimed at improving of foreign trade statistics in the future.
